SERVO EST 1953 & ELECTRONIC SALES LTD

This Quarter at Servo & Electronic Sales Ltd:

With the final months of the year approaching, many businesses are reviewing current projects and planning ahead for future requirements. Access to the right products, reliable information and flexible supply options can help make the sourcing process simpler.

In this edition, we're taking a closer look at the D38999 Series IV connector range, with over 500 configurations available to quote. We're also highlighting stainless steel connector solutions for demanding environments and taking a broader look at the physical infrastructure supporting the continued growth of digital technology.
Our aim remains simple: to help customers find suitable products, understand the options available and plan ahead with greater confidence.

D38999 Series IV

Explore over 500 Yeonhab connector configurations available to quote, designed for demanding applications requiring high-performance connectivity.

Stainless Steel Connectors

A look at Eaton Souriau D38999 and EN3645K corrosion-resistant solutions for severe environments, supported by rapid in-house assembly.

Data Centres - Behind the cloud

An overview of the physical infrastructure powering digital growth, featuring PFLITSCH cable glands, EMC shielding, and cable management solutions.

Featured Range

D38999 SERIES IV

500+ SERIES IV PARTS available to quote

Looking for a Series IV Connector? Contact the Servo team to discuss available configurations, product availability and lead times.

Servo offers over 500 configurations of Yeonhab D38999 Series IV connectors available to quote.

Based on the MIL-DTL-38999 Series IV connector format, the D38999 range provides a wide selection of configurations for demanding applications where reliable, high-performance connectivity is required.

Servo is the exclusive UK distributor for Yeonhab and supplies a broad range of Yeonhab connector solutions alongside the D38999 Series IV range.

Our team can provide information on available configurations, lead times and supply options to help identify a suitable solution for your requirements.

Built for Demanding Environments

Connector performance can depend on much more than electrical characteristics alone. Factors such as moisture, corrosion, chemicals, temperature and long-term environmental exposure can all influence the choice of connector material and finish.

Stainless Steel D38999 & EN3645K Connectors:

Servo supplies Eaton Souriau D38999 Series III and EN3645K connectors in Stainless Steel Passivated and Stainless Steel Nickel finishes.

The corrosion resistance and mechanical strength associated with stainless steel can make these connector solutions a valuable option for challenging applications involving moisture, humidity, frequent cleaning, outdoor exposure or corrosive environments.

For Applications Where Materials Matter

Stainless steel connector solutions can be considered across a range of demanding applications, including:

- Food and hygiene-critical equipment
- Industrial and process applications
- Outdoor and harsh-environment equipment
- Medical and pharmaceutical systems
- Marine and coastal installations

MECHANICAL STRENGTH

CORROSION RESISTANCE

WIDE TEMPERATURE RANGE

IP67/IP68

Need a Stainless Steel Connector?

Contact the Servo team to discuss available configurations, material and finish options, assembly services and product availability.

As an Eaton Authorised Distributor, Servo can also provide rapid in-house assembly on selected connector ranges, including EN3645K stainless steel connectors.

Behind the Cloud: The Physical Infrastructure Supporting Digital Growth

From cloud computing and artificial intelligence to connected infrastructure and automation, demand for data and processing power continues to grow.

Powering the Digital World:

Behind every digital service is a vast amount of physical infrastructure. Data centres and connected systems rely on servers, networking equipment, power distribution, cabling and interconnection technology to operate reliably.

While much of the conversation around digital growth focuses on software and processing power, reliable physical connectivity remains an essential part of the infrastructure supporting modern technology.

More Than Just Servers and Cables

Large and complex installations can involve thousands of interconnected components and extensive cable systems. Cable glands, cable entry systems and cable management solutions can help protect, route and organise these connections throughout equipment and infrastructure installations.

Servo supplies cable glands, cable entry systems and cable management solutions from manufacturers including PFLITSCH, providing options for demanding and complex cable installations.

Managing Signal Integrity and EMC

As communication and data systems become increasingly interconnected, electromagnetic compatibility can also become an important consideration.

EMC cable glands and shielding solutions can help support cable screening where cables enter equipment enclosures. Products such as the PFLITSCH blueglobe TRI range provide 360° contact with cable shielding while also supporting sealing and strain relief.

Servo also supplies split cable entry and sealing systems designed to simplify the installation of pre-assembled cables.

Supporting Connected Infrastructure

Servo supplies a broad range of products that can support demanding infrastructure applications, including:

- Cable glands and cable entry systems
- Circular and specialist connectors
- Backshells and connector accessories
- EMC and shielded cable management solutions
- Split cable entry systems
- Cable protection and sealing solutions

Behind every server, network and connected system is the physical infrastructure that keeps power, data, and equipment moving.

More From Servo

Servo & Electronic Sales Ltd. is a family-owned, franchised and value-added distributor of high-performance circular and rectangular connectors, accessories and cable management solutions.

Established in 1953, Servo supplies products for specialist, industrial and demanding applications from a range of established manufacturers and partners.

Our Range Includes:

- Circular and rectangular connectors
- Stainless steel and harsh-environment solutions
- Contacts and termination accessories
- Assembly and application tooling
- MIL-SPEC and high-reliability connector ranges
- Backshells and connector accessories
- Cable glands and cable management solutions

Servo also provides rapid in-house assembly services on selected connector ranges, including D38999 Series I and III, MIL-DTL-5015 type D/MS and EN3645K stainless steel connectors.
Selected connector series are also available through our 24, 48 and 72-hour quick-build service, with full batch and component traceability.

Thank you to all our customers, suppliers and partners for your continued support.

Our team is always available to help with current projects, future requirements and new product enquiries, providing practical advice, dependable supply and responsive support.

Yours,

The Servo Team

85,000+ Parts.
One Reliable Source.
From connectors to tooiling,
we keep your projects connected.

85,000+
Parts available

15+
Leading Manufacturers
